Updating the Package Code

After you've copied your marketing effort follow the simple steps below to update the package code (which is included in the source code) for accurate revenue tracking:

1. Click on the Segments tab
2. Click on the name of the Segment to highlight the row in blue
3. Click Edit
4. Click on the Source Code tab

5. Click on the Package drop down menu and select the blank field to remove the original Package code
6. Click on the Package drop down menu again and select Package, click out of the drop down menu and you should have a new Package code

7. Click Yes when this screen pops up
8. You now have an updated Package code and Source code.
